Cautionary Statement on Forward-Looking Information...

Certain information contained or incorporated by reference in this presentation, including any information as to our strategy, projects, plans or future financial or operating performance, constitutes “forward-looking statements”. All statements, other than statements of historical fact, are forward-looking statements. The words “expect”, “target”, “plan”, “guidance”, “ramp up”, “on track”, “project”, “continue”, “additional”, “growth”, “expand”, “transform”, “potential”, “focus”, “during”, “ongoing”, “scheduled”, “will”, “can”, “could”, and similar expressions identify forward-looking statements. In particular, this presentation contains forward-looking statements including, without limitation, with respect to: Barrick’s forward-looking production guidance, including our five and ten year outlooks and anticipated production growth from Barrick’s organic project pipeline and reserve replacement; estimates of future costs and projected future cash flows, capital, operating and exploration expenditures and mine life and production rates; our ability to convert resources into reserves and replace reserves net of depletion from production; mine life and production rates; our plans and expected completion and benefits of our growth projects, including work on the pre-feasibility study at Fourmile and the Pueblo Viejo plant expansion and mine life extension project and the El Naranjo Tailings Storage Facility; results of the feasibility studies completed for Reko Diq and the Lumwana Super Pit Expansion Project; an economic analysis for each of Reko Diq and the Lumwana Super Pit Expansion Project, including forecasted net present value, internal rate of return, cash flow forecasts and project capital; anticipated timing for construction and first production at the Lumwana Super Pit Expansion Project; the potential for existing assets, including Lumwana, Reko Diq, Fourmile and Porgera, to become Tier One assets; the potential for Lumwana to become a top 25 copper producer; Barrick’s global exploration strategy and planned exploration activities, including in North America, Latin America, Africa and the Middle East, and Asia Pacific Regions; Barrick’s copper strategy; our pipeline of high confidence projects at or near existing operations; the status of negotiations with the Government of Mali in respect of ongoing disputes regarding the Loulo-Gounkoto Complex and expected timing for the resumption of operations; potential mineralization and metal or mineral recoveries; joint ventures and partnerships; Barrick’s strategy, plans, targets, goals and expected benefits in respect of environmental and social governance issues, including local community development, resettlement, climate change and our renewable energy initiatives, health and safety and biodiversity initiatives; and expectations regarding future price assumptions, financial performance and other outlook or guidance.

Forward-looking statements are necessarily based upon a number of estimates and assumptions including material estimates and assumptions related to the factors set forth below that, while considered reasonable by the Company as at the date of this presentation in light of management’s experience and perception of current conditions and expected developments, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information. Such factors include, but are not limited to: fluctuations in the spot and forward price of gold, copper or certain other commodities (such as silver, diesel fuel, natural gas and electricity); risks associated with projects in the early stages of evaluation and for which additional engineering and other analysis is required; risks related to the possibility that future exploration results will not be consistent with the Company’s expectations, that quantities or grades of reserves will be diminished, and that resources may not be converted to reserves; risks associated with the fact that certain of the initiatives described in this presentation are still in the early stages and may not materialize; changes in mineral production performance, exploitation and exploration successes; risks that exploration data may be incomplete and considerable additional work may be required to complete further evaluation, including but not limited to drilling, engineering and socioeconomic studies and investment; the speculative nature of mineral exploration and development; lack of certainty with respect to foreign legal systems, corruption and other factors that are inconsistent with the rule of law; disruption of supply routes which may cause delays in construction and mining activities, including disruptions in the supply of key mining inputs due to the invasion of Ukraine by Russia and conflicts in the Middle East; risk of loss due to acts of war, terrorism, sabotage and civil disturbances; risks associated with artisanal and illegal mining; changes in national and local government legislation, taxation, controls or regulations and/or changes in the administration of laws, policies and practices, including the status of value-added tax refunds received in Chile in connection with the Pascua-Lama project; expropriation or nationalization of property and political or economic developments in Canada, the United States, Mali or other countries in which Barrick does or may carry on business in the future; risks relating to political instability in certain of the jurisdictions in which Barrick operates; timing of receipt of, or failure to comply with, necessary permits and approvals; non-renewal of or failure to obtain key licenses by governmental authorities; failure to comply with environmental and health and safety laws and regulations; increased costs and physical and transition risks related to climate change, including extreme weather events, resource shortages, emerging policies and increased regulations relating to greenhouse gas emission levels, energy efficiency and reporting of risks; Barrick’s ability to achieve its sustainability goals, including its climate-related goals and greenhouse gas emissions reduction targets; contests over title to properties, particularly title to undeveloped properties, or over access to water, power and other required infrastructure; the liability associated with risks and hazards in the mining industry, and the ability to maintain insurance to cover such losses; damage to the Company’s reputation due to the actual or perceived occurrence of any number of events, including negative publicity with respect to the Company’s handling of environmental matters or dealings with community groups, whether true or not; risks related to operations near communities that may regard Barrick’s operations as being detrimental to them; litigation and legal and administrative proceedings; operating or technical difficulties in connection with mining or development activities, including geotechnical challenges, tailings dam and storage facilities failures, and disruptions in the maintenance or provision of required infrastructure and information technology systems; increased costs, delays, suspensions and technical challenges associated with the construction of capital projects; risks associated with working with partners in jointly controlled assets; risks associated with Barrick’s infrastructure, information technology systems and the implementation of Barrick’s technological initiatives, including risks related to cybersecurity incidents, including those caused by computer viruses, malware, ransomware and other cyberattacks, or similar information technology system failures, delays and/or disruptions; the impact of global liquidity and credit availability on the timing of cash flows and the values of assets and liabilities based on projected future cash flows; the impact of inflation, including global inflationary pressures driven by ongoing global supply chain disruptions, global energy cost increases following the invasion of Ukraine by Russia and country-specific political and economic factors in Argentina; adverse changes in our credit ratings; fluctuations in the currency markets; changes in U.S. dollar interest rates; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); risks related to the demands placed on the Company’s management, the ability of management to implement its business strategy and enhanced political risk in certain jurisdictions; uncertainty whether some or all of Barrick’s targeted investments and projects will meet the Company’s capital allocation objectives and internal hurdle rate; whether benefits expected from recent transactions are realized; business opportunities that may be presented to, or pursued by, the Company; our ability to successfully integrate acquisitions or complete divestitures; risks related to competition in the mining industry; employee relations including loss of key employees; availability and increased costs associated with mining inputs and labor; and risks associated with diseases, epidemics and pandemics; risks related to the failure of internal controls; and risks related to the impairment of the Company’s goodwill and assets. In addition, there are risks and hazards associated with the business of mineral exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion, copper cathode or gold or copper concentrate losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks).

Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance. All of the forward-looking statements made in this presentation are qualified by these cautionary statements. Specific reference is made to the most recent Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a more detailed discussion of some of the factors underlying forward-looking statements and the risks that may affect Barrick’s ability to achieve the expectations set forth in the forward-looking statements contained in this presentation.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

Group Highlights...

- **Increased Q4 marginsⁱ across the group** on higher gold prices, higher production and lower costs
- **2024 production within guidance on back of solid Q4**
- **Q4 adjusted Net EPS¹ rose 50% y/y to \$1.26** despite ~10% impact due to Loulo-Gounkoto export restriction
- **Quarterly dividend maintained at \$0.10 / share**
- **Repurchased \$354 million in stock in Q4 – taking total for the year to \$498 million**
- **Replaced reserves for all gold and copper mined at Barrick's operations in 2024**
- **Delivered significant reserve growth from Lumwana and Reko Diq feasibility studies – 13 Moz gold and 13 Mt copper equating to 73 million GEOsⁱⁱ on an attributable basis^{2,13,14}**

Group Operating Results...

- **Q4 gold production up 15% q/q** supporting good finish for the year
- **Copper production increased 33% q/q** as Lumwana delivered on its plan
- Delivered **3% lower costs of sales** per ounce⁵ and **5% lower total cash costs** per ounce⁴ q/q
- **Nevada Gold Mines increased throughput and production by 9% and 15%**, respectively, from Q3 on strong performance across the operations
- **Achieved 2024 production guidance** for gold and copper

Gold operating results	Q4 2024	Q3 2024	2024	2023
Attributable production (koz)	1,080	943	3,911	4,054
Cost of sales (\$/oz) ⁵	1,428	1,472	1,442	1,334

Nevada Gold Mines... operating results

Carlin

- Successful completion of the Gold Quarry Roaster upgrade project, unlocking an additional 20% capacity
- Ren underground development advancing towards production in 2027

Cortez

- Gold production up 28% q/q on higher grades, increased underground mining and higher volumes prioritized for processing at the Carlin roasters
- 2024 production of 444 koz exceeded the high end of the 380-420 koz attributable guidance range

Turquoise Ridge

- 24% q/q increase in gold production on increases in autoclave and underground volumes of 31% and 13%, respectively
- Targeting higher production and lower costs in 2025 on back of productivity gains achieved in H2 2024

Key Growth Project...Fourmile gold projectⁱ

Proceeding to Prefeasibility Study

- 2024 mineral resource and **PEA covers approximately one-third of the known orebody**, as defined by drilling to date
- Incremental silicification of breccias from Rose through to Dorothy result in **increasing grades and better geotechnical rock quality to the north**, potentially enabling larger stopes with associated increases in production ratesⁱ
- Metallurgical test work demonstrates **amenability to both autoclave and roaster process conditions**
- **2025 PFS expenditure of \$78m planned** with 16 drill rigs targeting growth of resources, pilot roaster and autoclave tests and foundational studies to underpin the decision to commence the development of the Bullion Hill northern access portal

2024 Fourmile Mineral Resources			
	Mt	Grade (g/t)	Moz
Indicated	3.6	11.76	1.4
Inferred	14	14.1	6.4

Long section looking ENE 1km thick

Fourmile (100% Barrick) | Goldrush (NGM)

2024 Goldrush Mineral Resources (100% basis inclusive of Reserves) ¹⁵			
	Mt	Grade (g/t)	Moz
Indicated	53	6.00	10
Inferred	24	5.5	4.3

ⁱ Fourmile financial metrics and production metrics are based upon a preliminary economic assessment which is preliminary in nature because it includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary economic assessment will be realized.

New and emerging opportunities across North America

- **Canada** – Regional generative programs deliver highly prospective district-scale opportunities across Southern Superior with drilling in progress at Norris and Patris.
- **Western USA** – Expanding footprint in priority belts to secure and advance world-class gold and copper opportunities
- **Regional** – Field-focused evaluation of new and emerging opportunities across North America ensuring the best are secured and advanced

Nevada Gold Mines

- **Leeville** continues to provide world-class growth as underground drilling consistently delivers significant results e.g. NTC-24-021 – 22.1m @ 11.61g/t Au (TW)ⁱ
- New growth prospects defined in the **Greater Leeville** area
- **Swift** – targeted framework drilling beneath cover shows first indications of high grade
- New district opportunity consolidated east of **Gold Quarry in the Carlin Basin**
- Model upgrades at **Turquoise Ridge** lead to definition of several new near-mine targets within and on the margins of the current orebody

Latin America & Asia Pacific...

- Q/q improvement at Pueblo Viejo across flotation, CIL2 circuit stability and recovery step up
- 13 million ounces and 7.3 million tonnes attributable gold and copper reserves added from Reko Diq¹³
- Veladero delivers best production in last five years

Pueblo Viejo...

Dominican Republic

- **Pueblo Viejo plant expansion and mine life extension is designed to increase throughput to 14Mt p.a. and to sustain gold production at >800,000oz p.a. (100%)ⁱ**
- **Process plant expansion update**
 - Combined 35-days downtime in Q1 for throughput improvement projects
 - Additional throughput and recovery upgrades planned for H2 2025
- **El Naranjo Tailings Storage Facility (TSF) advancing**
 - Advancement of critical supply chain activities has commenced including contract tenders and long lead procurement
 - Field work initiated with access road construction

Pueblo Viejo... expansion

2025 Projects

- Continued focus on maximizing throughput and recovery
- Flash recycle implementation to allow for additional sulfides to be processed in the autoclave, contributing to overall throughput and recovery
- Deslime pump upgrades provide a mechanism to improve milling and flotation and send high grade slimes (fine/small) directly to POX
- CIL improvement with the addition of a third kiln to boost recovery and a grit removal circuit to increase overall efficiency. The upgraded thickener center well will support continuous ramp up of milled tonnage

Peru and Ecuador...

Building on an outstanding record of discovery and delivery

■ Peru

- **Libelula:** Drilling commences across a large gold epithermal system intersecting mineralized breccias in the first of three targets
- **Ccoropuro:** (copper-gold porphyry) permitting advancing positively with drilling planned in Q3 2025
- Generative work across Peru accelerated

■ Ecuador

Entry into world-class southern Jurassic Belt

- Barrick acquires first tenements in Ecuador: Valle del Tigre
- Following the signing of a commercial framework agreement between Barrick and Enami, fieldwork progresses in southern Jurassic Belt which hosts the Mirador and Fruta del Norte deposits

Unlocking a transformative Tier One Asset¹²

Pakistan, Reko Diq District...

Discovering new resources to provide optionality to the LOM

Reko Diq District Exploration

- District-scale review including major sampling program identifying multiple opportunities
- High impact targets to be prioritized according to grade, depth and metallurgy to provide maximum optionality
- Drilling confirms exploration models at several porphyry systems, including **Tanjeel and Gurich**
- Drilling outside historical resource at Gurich discovers significant extensions to copper mineralization including:
598m @ 0.43% Cu and 0.1g/t Au from 102 m, **including 170m @ 0.57% Cu and 0.13g/t Au** (from 340m)ⁱ
- Study identifies large undrilled Porphyry target at **Bukit Pasir**, located within 4km of the Western Porphyries

- Lumwana Super Pit Expansion permitted
- Engineering partners appointed for Lumwana and on track with early works design and long lead item fabrication
- Barrick signs Memorandum of Understanding with IRL, a subsidiary of Zambian Government's Industrial Development Corporation, to establish strategic partnership aimed at unlocking Zambia's mineral potential

2024 ATTRIBUTABLE PRODUCTION

BARRICK

Africa & Middle East...

Loulo-Gounkoto Gold Mining Complex...

Mali

- **Production increased 8% q/q**, exceeding guidance for the year
- Gold sales declined 65% q/q due to restrictions placed on exports by the Government of Mali during Q4, impacting AISC
- Cost of sales per ounce⁵ and total cash costs per ounce⁴ increased modestly q/q on higher mining volumes
- **Operations update**
 - On December 18, 2024, after multiple good faith attempts to resolve disputes, Somilo and Gounkoto submitted a request for arbitration to ICSIDⁱ
 - On January 14, 2025, due to the restrictions imposed by the Government of Mali on the operations of the mines, in violation of their Conventions, Barrick announced the temporary suspension of operations
 - Barrick remains in discussion with the Government to find a resolution to this situation

North Mara & Bulyanhulu Gold Mines...

Tanzania

North Mara

- **Increased production by 20% q/q** on higher grades and higher throughput
- **Cost of sales⁵ and total cash costs per ounce⁴** were **8% and 9% lower**, respectively, q/q driven by lower underground mining costs

Bulyanhulu

- **Production increased 19% q/q** driven by higher throughput, higher grades and higher recoveries
- **Q4 cost of sales⁵ and total cash costs⁴ declined 8% and 10%**, respectively, q/q reflecting higher grades and G&A cost reduction

North Mara (84%)	Q4 2024	Q3 2024	2024	2023
Gold produced (oz 000)	90	75	265	253
Cost of sales (\$/oz) ⁵	1,018	1,108	1,266	1,206
Total cash costs (\$/oz) ⁴	771	850	989	944
AISC (\$/oz) ⁴	1,098	1,052	1,274	1,335

Bulyanhulu (84%)	Q4 2024	Q3 2024	2024	2023

Lumwana Copper Mine...

Zambia

- **Quarterly record production up 53% q/q** driven by higher throughput, higher grades as planned and higher recoveries
- **C1 cash costs⁶ declined 25% q/q** due to higher grades and recoveries as well as fixed cost dilution on higher production
- Supporting Zambia's power challenges in collaboration with ZESCO - **co-generation initiatives have reduced reliance on the grid**, helping to alleviate the supply-demand gap
- **Super Pit Expansion feasibility study completed**, enabling construction work to commence in 2025, in-line with targeted first production in 2028
- **Barrick and Government of Zambia forge strategic partnership to drive mining exploration and development in Zambia**

Lumwana (100%)	Q4 2024	Q3 2024	2024	2023

Key Study Updates

- Expansion replaces the total copper produced by Lumwana since 2009 by over 400%¹⁴
- Hatch appointed as EPCM
- ESIA approved by ZEMA in November 2024
- 2 year expansion capital payback from mine cash flows after 2028ⁱⁱ

Africa & Middle East Exploration...

Expanding footprints in multiple world class terrains and emerging brownfield discoveries

Loulo / Gounkoto

Baboto Complex continues to exhibit characteristics of a system with the potential to deliver a large satellite deposit at Loulo. A comprehensive assessment of its full potential is planned for 2025

Senegal

Barrick and Managem execute an exploration alliance agreement (subject to government approval) covering 820km² of the highly prospective Birimian rocks of the KK Inlier in Senegal

Côte d'Ivoire

Driving the consolidation of a highly prospective greenfield exploration portfolio with a renewed focus on delivering Cote D'Ivoire's next major discovery

Saudi Arabia & Egypt

Pursuing growth opportunities

Kibali

Growing confidence in the multi-million-ounce potential of the ARK corridor, located less than 4km from the Kibali processing plant. Intensive drilling campaign planned for 2025 to assess the overall potential of the system

Tanzania

4900km² portfolio including two highly prospective and under-explored belt scale greenfield exploration projects - the 2800km² Nzega Project and the 570km² Siga Project, each of which exhibit the geological potential to deliver Tanzania's next Tier One asset.

Central African Copper Belt

2300km² of prospective greenfield exploration projects established across Zambia and the DRC in the prolific CACB

Peerless replacement of reserve depletion...

- Since year end 2019 **>180%**¹⁵ of company's gold reserve depletion replaced – **adding almost 46Moz of attributable proven and probable reserves¹⁵** (excluding acquisitions and divestments)
- On **100% basis** this represents **an addition of almost 77Moz¹⁵** of proven and probable reserves across Barrick managed assets (excluding acquisitions and divestments)
- During 2024 replaced **102%** of attributable gold depletion at **4% higher grade¹⁵** before the addition of **1,400Mt @ 0.28g/t** for **13Moz attributable probable Mineral Reserves from Reko Diq¹³**

Positioning Barrick to capitalize on the copper fundamentals...

- Group attributable copper reserves growth represents 224% increase in attributable metal at >13% higher grade year-on-year¹⁵
- Lumwana FS adds 5.5Mt of copper reserves resulting in P&P 8.3Mt Cu @ 0.52% attributable mineral reserves¹⁴
- Reko Diq FS adds P&P attributable mineral reserves of 7.3Mt Cu @ 0.48%¹³
- On 100% basis this represents an addition of more than 20Mt Cu¹⁵ of proven and probable reserves across Barrick managed assets

Organic Growth Strategy sets us apart...

Since Year End 2019, Barrick has grown Gold Equivalent Reserves comparable to many of the largest gold sector acquisitions... But at significantly lower cost!

5-Year GEO Production Forecastⁱ and Gold Costs...

* GEO from copper assets are calculated using gold price of \$2,397/oz for 2024 and \$1,400 for 2025 to 2029; and copper price of \$4.15/lb for 2024 and \$3.00/lb for 2025 to 2029. Copper produced at Reko Diq is included in GEOs
Costs are incorporating impact of royalties assuming gold price of \$2,400/oz and copper price of \$4.00/lb from 2025 onwards

Showcasing the unrealized value...

Barrick Market Capⁱ				\$28.5bn
	Analyst Consensus NAV^{i,ii}	Market Based P/NAV Multiple	Implied Value^{iv}	
Nevada Gold Mines (61.5% share)	\$13.5bn	1.58x ⁱⁱⁱ	\$21.3bn	
Barrick Copper Assets (including Reko Diq 50% share & Lumwana expansion)	\$8.7bn	At Least 1.0x ^v	At least \$8.7bn	
Combined Implied Value of NGM & Copper Assets			At least \$30.0bn	
Implied Value of Rest of Barrick	Negative			(\$1.5bn)

- Market based multiples imply negative value for Barrick's assets outside of NGM and copper, including:
 - Tier One Assets¹²: Kibali, Loulo-Gounkoto, Pueblo Viejo, potential to add Fourmile
 - Tier Two Assets¹²: Bulyanhulu, North Mara, Veladero, Porgera
 - Pipeline projects (e.g: Donlin Gold, Norte Abierto) and unparalleled exploration success

Building Barrick for the Future...

- **30% growth in GEOs** by end of decade supported by current reserves¹⁷
 - **Pueblo Viejo gold mine expansion** – 800koz p.a. for 20 years¹⁸
 - **2 Feasibility studies now completed** and progressed to development –
 - **Lumwana copper mine expansion**
 - **Reko Diq copper-gold project**
- **Fourmile** – world-class gold mine in the making – progresses to prefeasibility
- **A Strong Balance Sheet** to fund our growth while still paying dividends without diluting our shareholders
- **Significant growth in Reserves & Resources** continuing to replace depletion from mining

HSC-24004	91	(58)	136.5-147.2	10.7	9.0	4.52

- All intercepts calculated using a 3.4 g/t Au cut-off and are uncapped; minimum downhole intercept width is 2.4 meters; internal dilution is less than 20% total width.
- Carlin Trend drill hole nomenclature: Project area (NTC - North Turf Core, HSC - Horsham Underground Core) followed by the year (24 for 2024) then hole number.
- True width (TW) for NTC and HSC drillholes has been estimated based on the latest geological and ore controls model and it is subject to refinement as additional data becomes available.

The drilling results for Leeville contained in this presentation have been prepared in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*. All drill hole assay information has been manually reviewed and approved by staff geologists and re-checked by the project manager. Sample preparation and analyses are conducted by an independent laboratory, ALS Minerals. Procedures are employed to ensure security of samples during their delivery from the drill rig to the laboratory. The quality assurance procedures, data verification and assay protocols used in connection with drilling and sampling on Leeville conform to industry accepted quality control methods.

Appendix B – Reko Diq, Gurich Growth Plan Significant Intercepts

Select Reko Diq Drill Results ^a						
Drill Hole ^b	Azimuth	Dip	Interval (m)	Width (m)	Au (g/t)	Cu (%)
RD-925	200	(70)	102-700	598	0.1	0.43
			340-510	170	0.13	0.57

- a. All intercepts calculated using a 0.3% Cu cutoff and are uncapped; maximum internal dilution of 18 meters below 0.3% Cu.
b. Reko Diq drill hole nomenclature: Reko Diq District (RD) followed by hole number. Drill method is diamond drilling.

The drilling results for Gurich (H8) growth plan contained in this presentation have been prepared in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*. All drill hole assay information has been manually reviewed and approved by staff geologists and re-checked by the project manager. Sample preparation conducted onsite, and analyses are conducted by an independent laboratory, SGS - Karachi. Procedures are employed to ensure security of samples during their delivery from the drill rig to the laboratory. The quality assurance procedures, data verification and assay protocols used in connection with drilling and sampling at Reko Diq - Gurich conform to industry accepted quality control methods.

Appendix C – Assumptions/Outlook

Key Outlook Assumptions	2025	2026	2027+
Gold Price (\$/oz)	2,400	2,400	2,400
Copper Price (\$/lb)	4.00	4.00	4.00
Oil Price (WTI) (\$/barrel)	80	70	70
AUD Exchange Rate (AUD:USD)	0.75	0.75	0.75
ARS Exchange Rate (USD:ARS)	1,000	1,000	1,000
CAD Exchange Rate (USD:CAD)	1.30	1.30	1.30
CLP Exchange Rate (USD:CLP)	900	900	900
EUR Exchange Rate (EUR:USD)	1.10	1.10	1.10

Gold equivalent ounces calculated from our copper assets are calculated using a gold price of \$1,400/oz and copper price of \$3.00/lb. Barrick's ten-year indicative production profile for gold equivalent ounces is based on the following assumptions:

Barrick's five-year indicative outlook is based on our current operating asset portfolio, sustaining projects in progress and exploration/mineral resource management initiatives in execution. This outlook is based on our current reserves and resources and assumes that we will continue to be able to convert resources into reserves. Additional asset optimization, further exploration growth, new project initiatives and divestitures are not included. For the company's gold and copper segments, and where applicable for a specific region, this indicative outlook is subject to change and assumes the following: new open pit production permitted and commencing at Hemlo in the second half of 2025, allowing three years for permitting and two years for pre-stripping prior to first ore production in 2027; Tongon will enter care and maintenance by 2027; and production from the Zaldivar CuproChlor® Chloride Leach Project (Antofagasta is the operator of Zaldivar).

Our five-year indicative outlook excludes production from Fourmile, as well as Pierina and Golden Sunlight, both of which are currently in care and maintenance; and production from long-term greenfield optionality from Donlin, Pascua-Lama, Norte Abierto and Alturas. Barrick's five-year and ten-year production profile in this presentation also assumes an indicative gold and copper production profile for Reko Diq and an indicative copper production profile for the Lumwana Super Pit expansion, both of which are conceptual in nature.

Barrick's ten-year indicative production profile is subject to change and is based on the same assumptions as the current five-year outlook detailed above, except that the subsequent five years of the ten-year outlook assumes attributable production from Fourmile as well as exploration and mineral resource management projects in execution at Nevada Gold Mines and Hemlo.

Loulo-Gounkoto has been excluded from Barrick's 2025 guidance as a result of the temporary suspension of operations. We expect to update our guidance to include Loulo-Gounkoto when we have greater certainty regarding the timing for the restart of operations. For purposes of this indicative 5-year forecast only, we have assumed a scenario where Loulo-Gounkoto resumes operations on March 1, 2025. There can be no assurances that a definitive agreement to resolve the ongoing dispute with the Government of Mali will be reached by March 1, 2025 or at all. Refer to page 9 of the MD&A accompanying Barrick's annual 2024 financial statements for additional information.

Technical Information

The scientific and technical information contained in this presentation has been reviewed and approved by Craig Fiddes, SME-RM, Lead, Resource Modeling, Nevada Gold Mines; Richard Peattie, MPhil, FAusIMM, Mineral Resources Manager: Africa and Middle East; Peter Jones, AIG, Manager of Resource Geology Latin America and Asia Pacific, Simon Bottoms, CGeol, MGeol, FGS, FAusIMM, Mineral Resource Management and Evaluation Executive; and Joel Holliday, FAusIMM, Executive Vice-President, Exploration—each a “Qualified Person” as defined in National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*.

All mineral reserve and mineral resource estimates are estimated in accordance with National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*. Unless otherwise noted, such mineral reserve and mineral resource estimates are as of December 31, 2024.

Endnotes...

1. “Adjusted net earnings” and “adjusted net earnings per share” are non-GAAP financial measures. Adjusted net earnings excludes the following from net earnings: certain impairment charges (reversals) related to intangibles, goodwill, property, plant and equipment, and investments; gains (losses) and other one-time costs relating to acquisitions or dispositions; foreign currency translation gains (losses); significant tax adjustments not related to current period earnings; other items that are not indicative of the underlying operating performance of our core mining business; and the tax effect and non-controlling interest of these items. Management uses this measure internally to evaluate our underlying operating performance for the reporting periods presented and to assist with the planning and forecasting of future operating results. Management believes that adjusted net earnings is a useful measure of our performance because these adjusting items do not reflect the underlying operating performance of our core mining business and are not necessarily indicative of future operating results. Adjusted net earnings and adjusted net earnings per share are intended to provide additional information only and do not have any standardized meaning under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate these measures differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick’s annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
2. Estimated in accordance with National Instrument 43-101 - *Standards of Disclosure for Mineral Projects* as required by Canadian securities regulatory authorities. Estimates are as of December 31, 2024, unless otherwise noted. Proven mineral reserves of 270 million tonnes grading 1.75g/t, representing 15 million ounces of gold, and 380 million tonnes grading 0.42%, representing 1.6 million tonnes of copper. Probable reserves of 2,500 million tonnes grading 0.90g/t, representing 74 million ounces of gold, and 3,600 million tonnes grading 0.46%, representing 17 million tonnes of copper. Measured resources of 450 million tonnes grading 1.68g/t, representing 24 million ounces of gold, and 600 million tonnes grading 0.38%, representing 2.3 million tonnes of copper. Indicated resources of 4,800 million tonnes grading 1.01g/t, representing 150 million ounces of gold, and 5,400 million tonnes grading 0.39%, representing 22 million tonnes of copper. Inferred resources of 1,400 million tonnes grading 0.9g/t, representing 41 million ounces of gold, and 1,300 million tonnes grading 0.3%, representing 3.9 million tonnes of copper. Totals may not appear to sum correctly due to rounding. Complete mineral reserve and mineral resource data for all mines and projects, including tonnes, grades, and ounces, can be found on pages 83 – 92 of the MD&A accompanying Barrick’s annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
3. EBITDA is a non-GAAP financial performance measure, which excludes the following from net earnings: income tax expense; finance costs; finance income; and depreciation. Management believes that EBITDA is a valuable indicator of our ability to generate liquidity by producing operating cash flow to fund working capital needs, service debt obligations, and fund capital expenditures. Management uses EBITDA for this purpose. Adjusted EBITDA removes the effect of impairment charges; acquisition/disposition gains/losses; foreign currency translation gains/losses; and other expense adjustments. We also remove the impact of the income tax expense, finance costs, finance income and depreciation incurred in our equity method accounted investments. We believe these items provide a greater level of consistency with the adjusting items included in our adjusted net earnings reconciliation, with the exception that these amounts are adjusted to remove any impact on finance costs/income, income tax expense and/or depreciation as they do not affect EBITDA. We believe this additional information will assist analysts, investors and other stakeholders of Barrick in better understanding our ability to generate liquidity from our full business, including equity method investments, by excluding these amounts from the calculation as they are not indicative of the performance of our core mining business and not necessarily reflective of the underlying operating results for the periods presented. We believe this additional information will assist analysts, investors and other stakeholders of Barrick in better understanding our ability to generate liquidity from our attributable business and which is aligned with how we present our forward-looking guidance on gold ounces and copper pounds produced. Attributable EBITDA margin is calculated as attributable EBITDA divided by revenues - as adjusted. We believe this ratio will assist analysts, investors and other stakeholders of Barrick to better understand the relationship between revenues and EBITDA or operating profit. Starting with the Q2 2024 MD&A, we are presenting net leverage as a non-GAAP ratio and is calculated as debt, net of cash divided by the sum of adjusted EBITDA of the last four consecutive quarters. We believe this ratio will assist analysts, investors and other stakeholders of Barrick in monitoring our leverage and evaluating our balance sheet. EBITDA, adjusted EBITDA, attributable EBITDA, EBITDA margin and net leverage are intended to provide additional information to investors and analysts and do not have any standardized definition under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. EBITDA, adjusted EBITDA and attributable EBITDA exclude the impact of cash costs of financing activities and taxes, and the effects of changes in operating working capital balances and therefore are not necessarily indicative of operating profit or cash flow from operations as determined under IFRS. Other companies may calculate EBITDA, adjusted EBITDA, attributable EBITDA, EBITDA margin and net leverage differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick’s annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

Endnotes...

4. "Total cash costs" per ounce and "All-in sustaining costs" per ounce are non-GAAP financial measures. "Total cash costs" per ounce starts with cost of sales related to gold production and removes depreciation, the non-controlling interest of cost of sales, and includes by-product credits. "All-in sustaining costs" per ounce start with "Total cash costs" per ounce and includes minesite sustaining capital expenditures, sustaining leases, general and administrative costs, minesite exploration and evaluation costs, and reclamation cost accretion and amortization. These additional costs reflect the expenditures made to maintain current production levels. Barrick believes that the use of "Total cash costs" per ounce and "All-in sustaining costs" per ounce will assist investors, analysts and other stakeholders of Barrick in understanding the costs associated with producing gold, understanding the economics of gold mining, assessing our operating performance and also our ability to generate free cash flow from current operations and to generate free cash flow on an overall company basis. "Total cash costs" per ounce and "All-in sustaining costs" per ounce are intended to provide additional information only and do not have standardized definitions under IFRS and should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS. Although a standardized definition of all-in sustaining costs was published by the World Gold Council (a market development organization for the gold industry comprised of and funded by gold mining companies from around the world, including Barrick), it is not a regulatory organization, and other companies may calculate this measure differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick's annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
5. Gold cost of sales per ounce is calculated as cost of sales across our gold operations (excluding sites in closure or care and maintenance) divided by ounces sold (both on an attributable basis using Barrick's ownership share). Copper cost of sales per pound is calculated as cost of sales across our copper operations divided by pounds sold (both on an attributable basis using Barrick's ownership share).
6. "C1 cash costs" per pound and "All-in sustaining costs" per pound are non-GAAP financial measures. "C1 cash costs" per pound is based on cost of sales but excludes the impact of depreciation and royalties and includes treatment and refinement charges. "All-in sustaining costs" per pound begins with "C1 cash costs" per pound and adds further costs which reflect the additional costs of operating a mine, primarily sustaining capital expenditures, sustaining leases, general and administrative costs, minesite exploration and evaluation costs, royalties, reclamation cost accretion and amortization and write-downs taken on inventory to net realizable value. Management believes that the use of "C1 cash costs" per pound and "all-in sustaining costs" per pound will enable investors to better understand the operating performance of our copper mines as this measure reflects all of the sustaining expenditures incurred in order to produce copper. "C1 cash costs" per pound and "All-in sustaining costs" per pound are intended to provide additional information only and do not have standardized definitions under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate these measures differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick's annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
7. "Free cash flow" is a non-GAAP financial performance measure which deducts capital expenditures from net cash provided by operating activities. Management believes this to be a useful indicator of our ability to operate without reliance on additional borrowing or usage of existing cash. Free cash flow is intended to provide additional information only and does not have any standardized definition under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate this measure differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick's annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
8. "Realized price" is a non-GAAP financial measure. "Realized price" excludes from the following from sales: treatment and refining charges and cumulative catch-up adjustment to revenue relating to our streaming arrangements. Barrick believes this provides investors and analysts with a more accurate measure with which to compare to market gold and copper prices and to assess our gold and copper sales performance. Management believes that this measure provides a more accurate reflection of our Company's past performance and is a better indicator of its expected performance in future periods. The realized price measure is intended to provide additional information only and do not have standardized definitions under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate these measures differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick's annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
9. These amounts are presented on the same basis as our guidance. "Minesite sustaining capital expenditures" and "project capital expenditures" are non-GAAP financial measures. Capital expenditures are classified into minesite sustaining capital expenditures or project capital expenditures depending on the nature of the expenditure. Minesite sustaining capital expenditures is the capital spending required to support current production levels. Project capital expenditures represent the capital spending at new projects and major, discrete projects at existing operations intended to increase net present value through higher production or longer mine life. Management believes this to be a useful indicator of the purpose of capital expenditures and this distinction is an input into the calculation of all-in sustaining costs per ounce. Classifying capital expenditures is intended to provide additional information only and does not have any standardized definition under IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Other companies may calculate these measures differently. Further details including a detailed reconciliation of this non-GAAP financial measure to its most directly comparable GAAP measure are incorporated by reference and provided on pages 59 – 75 of the MD&A accompanying Barrick's annual 2024 financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

Endnotes...

10. Total reportable incident frequency rate ("TRIFR") is a ratio calculated as follows: number of reportable injuries x 1,000,000 hours divided by the total number of hours worked. Reportable injuries include fatalities, lost time injuries, restricted duty injuries, and medically treated injuries. Lost time injury frequency rate ("LTIFR") is a ratio calculated as follows: number of lost time injuries x 1,000,000 hours divided by the total number of hours worked.
11. Class 1 - High Significance is defined as an incident that causes significant negative impacts on human health or the environment or an incident that extends onto publicly accessible land and has the potential to cause significant adverse impact to surrounding communities, livestock or wildlife.
12. A Tier One Gold Asset is an asset with a \$1,400/oz reserve with potential to deliver a minimum 10-year life, annual production of at least 500,000 ounces of gold and with costs per ounce in the lower half of the industry cost curve. A Tier One Copper Asset/Project is an asset with a \$3.00/lb reserve with potential for +5Mt contained copper in support of at least 20 years life, annual production of at least 200ktpa, with costs per pound in the lower half of the industry cost curve. Tier One Assets must be located in a world-class geological district with potential for organic reserve growth and long-term geologically driven addition. A Tier Two Gold Asset is an asset with a reserve with potential to deliver a minimum 10-year life, annual production of at least 250,000 ounces of gold and total cash costs per ounce over the mine life that are in the lower half of the industry cost curve.
13. Reko Diq probable reserves of 1,400 million tonnes grading 0.28 g/t representing 13 million ounces of gold, probable reserves of 1,500 million tonnes grading 0.48% representing 7.3 million tonnes of copper, indicated resources of 1,800 million tonnes grading 0.25 g/t representing 15 million ounces of gold, indicated resources of 2,000 million tonnes grading 0.43% representing 8.4 million tonnes of copper, inferred resources of 640 million tonnes grading 0.2 g/t representing 3.9 million ounces of gold, and inferred resources of 690 million tonnes grading 0.3% representing 2.2 million tonnes of copper. Complete mineral reserve and mineral resource data for all mines and projects, including tonnes, grades, and ounces, can be found on pages 84-111 of Barrick's Fourth Quarter and Year-End 2024 Report. A Technical Report on Reko Diq will be prepared in accordance with Form 43-101F1 and filed on SEDAR+ and EDGAR within 45 days of Barrick's Mineral Reserves and Mineral Resources Press Release dated February 6, 2025. For further information with respect to the key assumptions, parameters and risks associated with Reko Diq, the mineral reserve and resource estimates included herein and other technical information, please refer to the Technical Report to be made available on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.
14. Lumwana proven reserves of 140 million grading 0.49% representing 0.68 million tonnes of copper, probable mineral reserves of 1,500 million tonnes grading 0.53% representing 7.6 million tonnes of copper, measured resources of 170 million tonnes grading 0.45% representing 0.77 million tonnes of copper, indicated resources of 1,800 million tonnes grading 0.50% representing 9.2 million tonnes of copper and inferred resources of 230 million tonnes grading 0.40% representing 0.91 million tonnes of copper. Complete mineral reserve and mineral resource data for all mines and projects, including tonnes, grades, and ounces, can be found on pages 83-92 of Barrick's Fourth Quarter and Year-End 2024 Report. A Technical Report on Lumwana will be prepared in accordance with Form 43-101F1 and filed on SEDAR+ and EDGAR within 45 days of Barrick's Mineral Reserves and Mineral Resources Press Release dated February 6, 2025. For further information with respect to the key assumptions, parameters and risks associated with Lumwana and other technical information, please refer to the Technical Report to be made available on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

Endnotes...

15. Proven and probable reserve gains from cumulative net change in reserves from year end 2019 to 2024. Reserve replacement percentage is calculated from the cumulative net change in reserves from 2020 to 2024 divided by the cumulative depletion in reserves from year end 2019 to 2024 as shown in the table below.

Year	Attributable P&P Gold (Moz)	Attributable Gold Acquisition & Divestments (Moz)	Attributable Gold Depletion (Moz)	Attributable Gold Net Change (Moz)	Reported Reserve Price USD/oz for GEO conversion
2019 ^a	71	—	—	—	—
2020 ^b	68	(2.2)	(5.5)	4.2	\$1,200
2021 ^c	69	(0.91)	(5.4)	8.1	\$1,200
2022 ^d	76	—	(4.8)	12	\$1,300
2023 ^e	77	—	(4.6)	5	\$1,300
2024 ^f	89	—	(4.6)	17	\$1,400
2020 – 2024 Total	N/A	(3.1)	(25)	46	N/A

Year	Attributable P&P Copper (Mlb)	Attributable Copper Acquisition & Divestments (Mlb)	Attributable Copper Depletion (Mlb)	Attributable Copper Net Change (Mlb)	Reported Reserve Price USD/lb for GEO conversion
2019 ^a	13,494	—	—	—	—
2020 ^b	12,691	—	(834)	31	\$2.75
2021 ^c	12,233	—	(636)	178	\$2.75
2022 ^d	12,252	—	(623)	642	\$3.00
2023 ^e	12,391	—	(589)	728	\$3.00
2024 ^f	40,201	—	(731)	28,542	\$3.00
2020 – 2024 Total	N/A	—	(3,413)	30,121	N/A

Attributable Proven and Probable organic gold equivalent reserve additions calculated from the cumulative net change in reserves from year-end 2020 to 2024 using reserve prices for gold equivalent ounce (GEO) conversion as shown in the tables above to result in the Attributable Net Change GEO tabulated below.

Year	Attributable P&P GEO	Attributable Acquisition & Divestments GEO	Attributable Depletion GEO	Attributable Net Change GEO (using reported reserve prices)
2019	—	—	—	—
2020	97	(2.2)	(7.4)	4.2
2021	97	(0.91)	(6.9)	8.5
2022	104	—	(6.3)	13
2023	105	—	(6.0)	6.7
2024	176	—	(6.1)	6.7
2020 – 2024 Total	N/A	(3.1)	(33)	111

Totals may not appear to sum correctly due to rounding.

Endnotes...

Attributable acquisitions and divestments includes the following: a decrease of 2.2 Moz in proven and probable gold reserves from December 31, 2019 to December 31, 2020, as a result of the divestiture of Barrick's Massawa gold project effective March 4, 2020; and a decrease of 0.91 Moz in proven and probable gold reserves from December 31, 2020 to December 31, 2021, as a result of the change in Barrick's ownership interest in Porgera from 47.5% to 24.5% and the net impact of the asset exchange of Lone Tree to i-80 Gold for the remaining 50% of South Arturo that Nevada Gold Mines did not already own.

All estimates are estimated in accordance with National Instrument 43-101 - Standards of Disclosure for Mineral Projects as required by Canadian securities regulatory authorities.

a. Estimates as of December 31, 2019, unless otherwise noted, Proven reserves of 280 million tonnes grading 2.42 g/t, representing 22 million ounces of gold and 420 million tonnes grading 0.4%, representing 3,700 million pounds of copper (which is equal to 1.7 million tonnes of copper). Probable reserves of 1,000 million tonnes grading 1.48 g/t, representing 49 million ounces of gold and 1,200 million tonnes grading 0.38%, representing 9,800 million pounds of copper (which is equal to 4.4 million tonnes of copper). Conversions may not recalculate due to rounding.

b. Estimates as of December 31, 2020, unless otherwise noted: Proven reserves of 280 million tonnes grading 2.37g/t, representing 21 million ounces of gold, and 350 million tonnes grading 0.39%, representing 3,000 million pounds of copper (which is equal to 1.4 million tonnes of copper). Probable reserves of 990 million tonnes grading 1.46g/t, representing 47 million ounces of gold, and 1,100 million tonnes grading 0.39%, representing 9,700 million pounds of copper (which is equal to 4.4 million tonnes of copper). Conversions may not recalculate due to rounding.

c. Estimates as of December 31, 2021, unless otherwise noted, Proven mineral reserves of 240 million tonnes grading 2.20g/t, representing 17 million ounces of gold and 380 million tonnes grading 0.41%, representing 3,400 million pounds of copper (which is equal to 1.6 million tonnes of copper), and probable reserves of 1,000 million tonnes grading 1.60g/t, representing 53 million ounces of gold and 1,100 million tonnes grading 0.37%, representing 8,800 million pounds of copper (which is equal to 4.0 million tonnes of copper). Conversions may not recalculate due to rounding.

d. Estimates as of December 31, 2022, unless otherwise noted. Proven mineral reserves of 260 million tonnes grading 2.26g/t, representing 19 million ounces of gold and 390 million tonnes grading 0.40%, representing 3,500 million pounds of copper (which is equal to 1.6 million tonnes of copper), and probable reserves of 1,200 million tonnes grading 1.53g/t, representing 57 million ounces of gold and 1,100 million tonnes grading 0.37%, representing 8,800 million pounds of copper (which is equal to 4.0 million tonnes of copper). Conversions may not recalculate due to rounding.

e. Estimates are as of December 31, 2023, unless otherwise noted. Proven mineral reserves of 250 million tonnes grading 1.85g/t, representing 15 million ounces of gold, and 320 million tonnes grading 0.41%, representing 1.3 million tonnes of copper. Probable reserves of 1,200 million tonnes grading 1.61g/t, representing 61 million ounces of gold, and 1,100 million tonnes grading 0.38%, representing 4.3 million tonnes of copper.

f. Estimates are as of December 31, 2024, unless otherwise noted. Proven mineral reserves of 270 million tonnes grading 1.75g/t, representing 15 million ounces of gold, and 380 million tonnes grading 0.42%, representing 1.6 million tonnes of copper. Probable reserves of 2,500 million tonnes grading 0.90g/t, representing 74 million ounces of gold, and 3,600 million tonnes grading 0.46%, representing 17 million tonnes of copper.

16. Attributable organic gold equivalent reserve \$/oz additions are calculated from the cumulative net change in reserves from year-end 2019 using reserve prices for gold equivalent ounce (GEO) conversion as outlined in Endnote 15, divided by the total attributable Barrick group expenditure on exploration, reserve conversion and technical studies from preliminary economic assessment, pre-feasibility and feasibility during the same period.
17. Gold Equivalent Ounces from copper assets are calculated using a gold price of \$1,400/oz and a copper price of \$3.00/lb. Projected growth. Refer to Appendix C. Assumes an indicative production profile for Reko Diq and Lumwana, both of which are conceptual in nature. Does not include Fourmile.
18. Refer to the Technical Report on the Pueblo Viejo Mine, Dominican Republic, dated March 17, 2023 and filed on SEDAR+ at www.sedarplus.ca and EDGAR at www.sec.gov on March 17, 2023.
